# Int 21H, AH=65H, AL=A0H

## Version

4.0 and higher

## Brief

capitalize filename character

## Family API

## Input

```
AX = 65A0h
DL = character to capitalize
```

## Return

```
DL = capitalized character
CF set on error
AX = error code (see #01680 at AH=59h/BX=0000h)
CF clear if successful
```

## Macro

## Notes

Nonfunctional in MS-DOS 4.00 through 7.10 (Win98) due to a bug (the code sets a pointer depending on the high bit of AL, but doesn't clear the bit before branching by function number). Supported and functional(!) in Novell DOS 7 (Update 15), as well as PC-DOS 7 and OS/2 MVDm
