

This call gets the current date and time maintained by the operating system.

## Syntax

DosGetDateTime (DateTime)

## Parameters

;DateTime (PDATETIME) - output : Address of the date and time structure: ::hours (UCHAR) - Current hour ::minutes (UCHAR) - Current minute ::seconds (UCHAR) - Current second ::hundredths (UCHAR) - Current hundredth of a second ::day (UCHAR) - Current day ::month (UCHAR) - Current month ::year (USHORT) - Current year ::timezone (SHORT) - Minutes west of UTC (Universal Time Coordinate) ::weekday (UCHAR) - Current day of the week. Sunday is 0.

## Return Code

rc (USHORT) - return Return code description is: \* 0 NO\_ERROR

## Remarks

The dayofweek value is based on Sunday equal to zero. The value of timezone is the difference in minutes between the current time zone and UTC. This number is positive if it is earlier than UTC and negative if it is later than UTC. For Eastern Standard Time, this value is 300 (5 hours earlier than UTC).

If the application is executing in the OS/2 environment, it is more efficient to obtain these variables by calling DosGetInfoSeg instead of this function. However, applications written to the family API cannot depend on the availability of DosGetInfoSeg.

## Example Code

## C Binding

```
<PRE> typedef struct _DATETIME { /* date */
```

```
    UCHAR    hours;           /* current hour */
    UCHAR    minutes;        /* current minute */
    UCHAR    seconds;        /* current second */
    UCHAR    hundredths;     /* current hundredths of a second */
    UCHAR    day;            /* current day */
    UCHAR    month;          /* current month */
    USHORT   year;           /* current year */
    SHORT    timezone;       /* minutes of time west of UTC */
    UCHAR    weekday;        /* current day of week */
```

```
} DATETIME;
```

```
#define INCL_DOSDATETIME
```

```
USHORT rc = DosGetDateTime(DateTime); PDATEIME DateTime; /* Address of date/time structure  
(returned) */ USHORT rc; /* return code */ </PRE> This example gets the current time and date.
```

```
<PRE> #define INCL_DOSDATETIME
```

```
DATETIME DateBuffer; USHORT rc;
```

```
rc = DosGetDateTime(&DateBuffer); /* Date/Time structure */ </PRE> The following example obtains  
and prints date and time information. It then changes the system date to 5/10/1987 and prints the  
updated information.
```

```
<PRE> #define INCL_DOSDATETIME #include <os2.h>
```

```
main() {
```

```
DATETIME   DateTime;          /* Structure to hold date/time info. */  
USHORT     rc;
```

```
rc = DosGetDateTime(&DateTime); /* Address of d/t structure */  
printf("Today is %d-%d-%d; the time is %d:%d\n", DateTime.month,  
        DateTime.day, DateTime.year, DateTime.hours, DateTime.minutes);  
DateTime.day = 10;  
DateTime.month = 5;  
DateTime.year = 1987;  
printf("The new date is %d-%d-%d; the time is %d:%d\n", DateTime.month,  
        DateTime.day, DateTime.year, DateTime.hours, DateTime.minutes);  
rc = DosSetDateTime(&DateTime); /* Address of d/t structure */  
printf("rc is %d\n", rc);
```

```
} </PRE>
```

## MASM Binding

```
<PRE> DATETIME struc
```

```
date_hours      db  ? ;current hour  
date_minutes    db  ? ;current minute  
date_seconds     db  ? ;current second  
date_hundredths db  ? ;current hundredths of a second  
date_day         db  ? ;current day  
date_month       db  ? ;current month  
date_year        dw  ? ;current year  
date_timezone    dw  ? ;minutes of time west of UTC  
date_weekday     db  ? ;current day of week
```

```
DATETIME ends
```

EXTRN DosGetDateTime:FAR INCL\_DOSDATETIME EQU 1

PUSH@ OTHER DateTime ;Date/time structure (returned) CALL DosGetDateTime

Returns WORD </PRE>
