FS_FINDCLOSE

Purpose

Provides the mechanism for an FSD to release resources allocated on behalf of *FS_FINDFIRST* and *FS_FINDNEXT*.

Calling Sequence

```
int far pascal FS_FINDCLOSE(pfsfsi, pfsfsd)

struct fsfsi far * pfsfsi;
struct fsfsd far * pfsfsd;
```

Where

pfsfsi is a pointer to the file-system-independent file search structure.

The FSD should not update this structure.

pfsfsd is a pointer to the file-system-dependent file search structure.

The FSD may use this to store information about continuation of its search.

Remarks

DosFindClose has been called on the handle associated with the search buffer. Any file system related information may be released.

If *FS_FINDFIRST* for a particular search returns an error, an *FS_FINDCLOSE* for that search will not be issued.
